

The UPLIFT Desk gives you the freedom to set up the components like the keypad, control box, and any extra options like a keyboard tray or CPU holder, however you'd like! Before you start installing anything, take a moment to decide how you'd like your desk configured. Below are few suggestions to get you started. Consider how you will use your desk, and make this desk your own!

(all diagrams depict an UPLIFT frame on a 72" x 30" desktop)

Our C-Frame

The UPLIFT Desk is a C-Frame frame that offers ample depth from the front of the desktop to the crossbar, allowing room for mounting accessories underneath.

All desks include a keypad and a control box. The control box is like the 'brain' for the desk. It can be mounted in several places, and was designed to fit between the crossbar rails.

Keyboard Tray

With the optional crossbar center rails installed, a shorter keyboard tray track is required. Note: the 21" track will not fit by itself. You will need a track spacer (see section at bottom of page)

CPU Holder

When determining where to place your CPU Holder, account for the width and depth of your computer. On a C-frame UPLIFT Desk, there is enough depth to mount a 16" CPU holder track perpendicular to the front of the desk.

You may also mount it parallel to the front of the desk, if that would better fit your needs.

Please note: on a 48" wide desktop, the CPU Holder is best mounted behind the crossbar with the track parallel to the back edge of the desktop.

Track Spacer

To maximize the space under your desk, use an UPLIFT Track spacer to mount your longer keyboard tray track and CPU holder track can fit over the UPLIFT Desk's frame ends and crossbars.
