Hive Acoustic Wall Tile

Step 1
Choose a place on your wall where you want to hang your Acoustic tile. Mark the edges of the tile on the wall with a pencil to help with placement and to ensure the tile will be level when affixed to the wall.
Repeat this if you are mounting several tiles.

Option 1 - Finish Nails
Depending on your wall material, you may need 1" or 1.5" long finish nails.
Hold the tile in its spot, and hammer in the nails near the corners.
Drive the nails with enough force to get them into the wall, but don’t hammer so hard that you might dent or damage the tile.

Option 2 - Loctite® Construction Adhesive
Apply a bead of adhesive two inches from the edge of the tile.
Follow the instructions on the Loctite® Adhesive carefully.
Carefully align the tile into the space you’ve drawn in Step 1, and press firmly around the edge as detailed in the Adhesive’s instructions.

Option 3 - TensorGrip Spray Adhesive
Spray the Adhesive onto the tile following the instructions on the canister carefully.
Carefully align the tile into the space you’ve drawn in Step 1, and press firmly on the tile as detailed in the Adhesive’s instructions.
